

Undergraduate Research & Creative Activities

Experience the personal interactions of a small college with the faculty expertise of a major research university.

Undergraduate involvement in scholarly activities is “hands-on,” often independent in nature, and greatly contributes to career readiness. The experience from a research or creative project helps to develop transferable skills and prepares students for a fulfilling career and for graduate school.

Scholarship takes many forms. Research is often associated with the sciences and humanities. Creative activities are often associated with the arts, but scholarship is a unifying standard underlying all forms of academic inquiry.

Research opportunities are available in virtually all disciplines represented at ETSU: sciences, social sciences, humanities, visual and performing arts, education, business, nursing, health sciences, technology, and more.

You are greatly encouraged to explore the scholarship opportunities that ETSU makes available to its undergraduate students.
